

LiftMaster Garage Door Openers Feature Outstanding Security+™ Safety and Convenience Features

In today's world, security, safety and convenience become more important than ever. As the industry's largest manufacturer with over 40 years of experience, LiftMaster knows what you want in a garage door opener.

That's why our feature package goes beyond the "usual" and expands into important expected AND unexpected features. We believe that you will find that every garage door opener we manufacture will exceed your expectations! We offer EXCLUSIVE features that you won't find in other manufacturer's garage door opener models. As a matter of fact, LiftMaster Garage Door Openers have created a whole new standard for the industry with the following Security, Safety and Convenience packages.

Security+ features included as standard

Patented Security+ Rolling Code technology you'll call peace of mind! LiftMaster Security+ generates a brand new security code with every push of the remote control. LiftMaster's Security+ anti-burglary technology rolls the code over to any one of over 100 billion new codes, never to be repeated. Stolen codes are useless to unwanted intruders and your home is safe and secure.

Premium lighting features include an automatic security light "on" feature. After darkness falls and if someone breaks The Protector System® beam, the garage door opener lights will turn on and stay lit for 4-1/2 minutes -- no need to ever enter a dark garage again. Other premium lighting features allow you to turn opener lights on and off from your Multi-Function Remote Control.

Posi-Lock™ In addition to the mechanical locking features built into each LiftMaster Garage Door Opener, this PosiLock feature electronically secures a closed door and monitors against a forced opening. When the garage door is down, it is securely locked. If an intruder tries to open your door, PosiLock automatically reactivates your opener to the closed position.

Temporary Password Option for the Keyless Entry System allows you the ability to provide a temporary password to friends, family and service people, without having to reveal your private password. This temporary password (security code) can be programmed for a limited number of activations or for a predetermined number of hours of operation.

Safety features included as standard

The Protector System® An infrared safety reversing system protects people, pets and automobiles from the path of a closing door by projecting an invisible beam across the inside of the garage door opening.* If anything interrupts the beam while the door is going down, The Protector System automatically reverses the door without making contact. If the beam is obstructed, the door will not close. Meets federal and state laws and UL safety regulations.

Automatic safety reverse/automatic door stop provides a second and third form of protection from a moving garage door. Reverses the door automatically if an obstruction is

encountered as the door is being closed; and stops the door if an obstruction is encountered as the door is being opened. The garage door can also be stopped or locked at any height for ventilation.

Convenience features included as standard

Patented Smart Garage Door Opener® technology allows you to program remote controls with pushbutton ease. Electronically learns additional Security+™ remote controls from the Multi-Function Control Panel or the powerhead, easier and faster than ever.

Program additional remotes from the Multi-Function Control Panel. Allows you to program additional remote controls and Keyless Entry from the control panel -- without ever having to climb a ladder. Also, when activated, the lock switch blocks all outside radio signals while you're away. You can open and close the garage door from inside the garage and turn opener lights on and off.

HomeLink® compatible. This year hundreds of thousands of automobiles sold in the United States will be equipped with HomeLink, the in-vehicle universal remote control system. Now, at the touch of a button on the car's built-in control console, you can open and close your garage door or turn inside lights on and off from the comfort of your car.** As a complement to this system, all LiftMaster Security+ Garage Door Openers are HomeLink compatible. Contact your local automotive dealer for more details.

*WARNING: Garage door openers can be dangerous if not properly installed, operated, tested and maintained. Children should be supervised by an adult whenever in or around the garage area.

**Optional model 742LM plug-in light control required.
